-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 March 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This Office Action is in response to the Request for Continued Examination filed 14 March 2007.

Claim Rejections - 35 USC § 102

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1, 3-6, 8-10, 13, and 15-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Roy et al (US Patent 5,966,135), hereinafter Roy.

1. Regarding claim 1, Roy teaches displaying a subject image (taught as the display of a map within a browser, at col. 11, lines 31-45), displaying an enlargement of the subject image in response to a user selection and a point, determined from the user selection, on which the enlargement is based, (taught as the ability of the user to zoom in around a selected point on the map, at col. 13, lines 25-29), and displaying upon the enlargement, a point upon which the enlargement is based as a first co-ordinate parameter (taught as the selection of "map objects" through user clicks, such as the point upon which the enlargement is centered, at col. 13, lines 41-46, which may be defined in co-ordinate values or longitude/latitude values, at col. 19, lines 16-17. Furthermore, Roy teaches the display of information relating to selected map objects through reports, at col. 12, lines 57-62, which includes returning point data, as seen in Appendix C of col. 19. Roy further discusses defining objects by co-ordinate values, at col. 5, lines 21-34).

Art Unit: 2173

2. Regarding claim 3, Roy teaches displaying a further enlargement of a previous enlargement of the subject image in response to a user selection, wherein the enlargement is based on a point determined from the user selection, taught as the ability to zoom through differing zoom levels around a selected point, at col. 13, lines 25-29 and 41-44.

3. Regarding claim 4, Roy teaches displaying an enlargement of the subject image in response to a user selection is centered about the determined point, taught as the ability to zoom in around a selected point, at col. 13, lined 25-29.

4. Regarding claim 5, Roy teaches displaying a reduction of a previous enlargement of the subject image in the same scale as the subject image prior to enlargement, taught as the return to a previous zoom level, at col. 13, lines 41-44.

5. Regarding claim 6, Roy teaches returning a second point, in response to a user selection, as a second co-ordinate parameter, taught as the choosing of multiple map objects, at col. 12, lines 54-56.

6. Regarding claims 8-10, Roy teaches a computer program comprising instructions, computer-readable storage medium having data representing instructions, and an apparatus having a display, a processor, and a user input device, all for displaying a subject, displaying an enlargement of the subject image in response to a user selecting a point on the subject image and displaying on that enlargement that point selected by the user, and returning a point previously selected by the user as displayed on an enlargement of the subject image as a first

co-ordinate parameter, at col. 3, lines 62-67 through col. 4, lines 1-56.

7. Regarding claim 13, Roy teaches displaying a subject image (taught as the display of a map within a browser, at col. 11, lines 31-45), displaying an enlargement of the subject image in response to a user selecting an area on the subject image and determining and displaying on that enlargement a point upon which the enlargement is based (taught as the ability of the user to zoom in around a selected point on the map, at col. 13, lines 25-29), and identifying the point selected by the user as displayed on an enlargement of the subject image as a first co-ordinate parameter (taught as the selection of "map objects" through user clicks, at col. 13, lines 41-46, which may be defined in co-ordinate values or longitude/latitude values, at col. 19, lines 16-17. Furthermore, Roy teaches the display of information relating to selected map objects through reports, at col. 12, lines 57-62, which includes returning point data, as seen in Appendix C of col. 19. Roy further discusses defining objects by co-ordinate values, at col. 5, lines 21-34. Also, if the point selected is displayed on the enlarged image, it inherently is identified as displayed: either by the user who notices the display of the selected point, or by the program that centers the image zoom around the selected point).

8. Regarding claim 15, Roy teaches displaying a further enlargement of a previous enlargement of the subject image in response to a user selection on the enlargement, taught as the ability to zoom through differing zoom levels, at col. 13, lines 25-29 and 41-44.

9. Regarding claim 16, Roy teaches displaying an enlargement of the subject image in response to a user selecting a point on that subject image displayed centered about that point selected by the user, taught as the ability to zoom in around a selected point, at col. 13, lined

25-29.

10. Regarding claim 17, Roy teaches determining and returning a second point based on a user selection as a second co-ordinate parameter, taught as the choosing of multiple map objects, at col. 12, lines 54-56.

Claim Rejections - 35 USC § 103

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 2 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roy and Smith (UK Application GB 2,344,037, as cited in the previous Office Action).

11. Regarding claims 2 and 14, Roy teaches returning a point previously selected by the user (identifying the point) as displayed on an enlargement of the subject image as a first co-ordinate parameter (taught as the selection of "map objects" through user clicks, at col. 13, lines 41-46, which may be defined in co-ordinate values or longitude/latitude values, at col. 19, lines 16-17), and displaying a reduction of a previous enlargement of the subject image (taught as the return to a previous zoom level, at col. 13, lines 41-44).

However, Roy fails to explicitly teach returning a point previously selected by the user (identifying the point) as displayed on an enlargement of the subject image as a first co-ordinate and displaying a reduction of a previous enlargement of the subject image in response to a single user input.

Smith teaches a graphical application that displays subject images and enlarges the subject image in response to user action, similar to the method of Roy. Furthermore, Smith

teaches returning a point previously selected by the user (identifying the point) as displayed on an enlargement of the subject image as a first co-ordinate and displaying a reduction of a previous enlargement of the subject image in response to a single user input, taught as the return to an original scale in response to the selection of a first point in a line, at page 5, lines 31-37.

Therefore, it would have been obvious to one of ordinary skill in the art, having the teachings of Roy and Smith before him at the time the invention was made to modify the returning of a point previously selected by the user (identifying the point) as displayed on an enlargement of the subject image as a first co-ordinate and displaying a reduction of a previous enlargement of the subject image with the single input trigger of Smith, in order to obtain a graphical application that returns point co-ordinates and the display to the original scale in response to a single user input.

One would be motivated to make such a combination for the advantage of more precise selection of a point provided by an enlarged view. See Smith, page 5, lines 39-43.

Claims 7, 11, 12, and 18-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Roy and Boyce et al (US Patent 6,459,986), hereinafter Boyce.

12. Regarding claims 7 and 18, Roy teaches returning a first co-ordinate parameter and a further point selected by the user as a second co-ordinate parameter, taught as the choosing of multiple map objects, at col. 12, lines 54-56.

However, while Roy discloses viewing the distance between any two points on a map picture (col. 12, lines 10-13), Roy fails to explicitly teach performing a calculation to determine the distance between the first and second co-ordinate parameters.

Boyce teaches a routing system for use with maps, as those disclosed in Roy. Furthermore, Boyce teaches a method for performing a calculation to determine the distance between the first and second co-ordinate parameters, at col. 4, lines 18-22.

Therefore, it would have been obvious to one of ordinary skill in the art, having the teachings of Roy and Boyce before him at the time the invention was made to modify the scalable map display with point-selection means of Roy with the first and second co-ordinate distance calculating of Boyce in order to obtain a scalable map display wherein the distance between selectable points may be calculated.

One would be motivated to make such a combination for the obvious advantage of displaying pertinent information to a user, or assisting the routing system of Boyce in finding the most suitable route between selected points. See Boyce, col. 4, lines 18-22.

13. Regarding claims 11, 12, 19, and 20, Boyce teaches determining distances between first and second co-ordinate parameters that are not straight line distances but instead are actual distances that can be traversed to connect the first and second co-ordinate parameters, the actual distance including at least one permissible travel route between the points, taught as the generation of a route over travelable roads between a user-selected starting point and destination point, at col. 3, lines 14-20, 28-31, and col. 4, lines 14-22.

Response to Arguments

Applicant's arguments filed 14 March 2007 have been fully considered but they are not persuasive.

Applicant argues on page 7 of the remarks that Roy fails to teach displaying an enlarged image and a point from which the enlarged image is based. The examiner respectfully

disagrees. As cited above, Roy teaches the zooming of an image around a selected point, the point then being displayed in the center of the enlarged image. Furthermore, Roy teaches the display as a point upon which the initial image is based and used as a first co-ordinate point, taught as the returning of co-ordinate values in the above cited map object reports.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Roswell whose telephone number is (571) 272-4055. The examiner can normally be reached on 8:30 - 6:00 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Cabeca can be reached on (571) 272-4048. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
